Idaho State

A little ISU Bengal Pride happening! Our team was recently on site in the Idaho State mini dome doing work with our TMS 9000-E truck crane.

Mountain Cooler!

Mountain Block Party

Most large scale projects require several different tasks to take place simultaneously in order to stay on schedule and on budget. That was the case this month when we dispatched 5 different crews and cranes to the same address. Each of the cranes were assisting in multiple ways from hoisting supplies, setting rebar, and building up the tower crane. It takes a great team effort, a safety-minded crew and thorough planning, but is well worth it in the end.

Building the Tower Crane

UTILIZING OUR RAILSPUR

Could our railspur save you time and money?

Our railspur and storage facility was just the answer for a recent customer. Our team off-loaded 7 pieces from our rail spur and set them securely in our storage yard until the project is ready for each piece. Logistics can be difficult, let us help prevent delays!

Bringing Up the Blades!

We never get tired of these power house shots! Our M1070 tugger is working along with our goldhofer trailer equipped with the FTV 550 attachment to bring the massive wind turbine blades up the mountain in the Pacific Northwest.

Safety Strong, Safety Share

"Your feet have 26 bones for support and 38 joints for movement in each foot. Protective footwear worn in the workplace is designed to protect your feet from many physical hazards. Be sure to use steel toe foot protection and well fitting shoes at all times. You should never cut corners in regards to PPE or any safety matter."

Bryce Olsen, Field Safety Manager

The core of Mountain is a top notch crew who is committed to SAFETY and executing every job with professionalism and precision. We are proud to be Mountain strong.
